

A PCA plot showing the first two principal components, Axis.1 (28.1% variance) and Axis.2 (20.1% variance). The plot displays two clusters of data points: red and teal. Each cluster is enclosed by a corresponding colored ellipse representing the confidence interval. The red cluster is generally located in the lower-left quadrant, while the teal cluster is in the upper-right quadrant. There is some overlap between the two clusters in the center of the plot.
