

The figure consists of two side-by-side histograms. The left histogram is for the 'Control' class, showing a single prominent red bar at age 50. The right histogram is for the 'Parkinson' class, showing a more varied distribution with red bars at ages 40, 45, 55, 60, 65, 70, 75, 80, and 85. A vertical black line separates the two plots. Both plots have a y-axis with horizontal dotted grid lines and a solid black horizontal line at the baseline.
